

## **AUDIO IGLOO.**

**2004 Parochial Church, SINGUHR Gallery Berlin.**

**Igloo structure made up of 400 recycled loudspeakers, tuners, record players, and receivers : these are all wired together and produce a low-pitched "white noise" via electromagnetic air waves that alters during the day due to the local environment and meteorological changes.**

**The sound emanating from the 400 speakers inside the igloo is much like a low-pitched waterfall and differs according to where one stands inside it.**
